Professional Summary

Computer Science undergraduate specializing in AI/ML and backend engineering, with hands-on experience building Retrieval-Augmented Generation (RAG) pipelines, multi-agent LLM systems, and Python-based backend services using FastAPI and LangChain/LangGraph. Skilled in explainable AI (SHAP, LIME), vector search, and API development, with a strong foundation in NLP and scalable system design.

Education

B.M.S. College of Engineering, Bangalore 2022 – 2026
Bachelor of Engineering in Computer Science and Engineering

Technical Skills

- **Languages:** Python, SQL
- **AI/ML & NLP:** Machine Learning, Deep Learning, NLP, LLMs, RAG, Prompt Engineering, AI Agents, LangChain, LangGraph, SentenceTransformers, Vector Search, Explainable AI, SHAP, LIME, BLEU, ROUGE
- **Backend & API Development:** FastAPI, REST APIs, Backend Development, Software Development, MCP Server
- **Databases:** MongoDB, MySQL
- **Developer Tools & Cloud:** Docker, Git, GitHub, Linux, Google Cloud Platform, Bright Data
- **Frameworks & Libraries:** Streamlit

Projects

Hallucination Prevention in LLM *Python, RAG, SHAP, LIME* 2025

- Architected a Retrieval-Augmented Generation (RAG) pipeline using SentenceTransformers and cosine similarity to ground LLM responses in authoritative legal databases (IPC, CrPC), reducing reliance on unverified model outputs.
- Engineered a confidence-logic gate to categorize LLM outputs by reliability, improving response transparency for downstream legal use cases.
- Integrated SHAP and LIME for feature-level interpretability, mitigating black-box risk and enabling explainable AI diagnostics for non-technical stakeholders.
- Built an automated evaluation pipeline using BLEU and ROUGE metrics to quantitatively benchmark linguistic fluency and alignment with legal precedent.
- Developed an interactive XAI dashboard visualizing feature importance, bridging the trust gap between AI outputs and legal professionals.

Multi-Agent Stock Recommendation System *LangChain, LangGraph, MCP* 2025

- Designed and implemented an end-to-end multi-agent AI system for automated stock recommendations, orchestrating specialized worker agents through a supervisor architecture built with LangGraph state graphs.
- Integrated Bright Data's MCP server to enable real-time web scraping, grounding agent outputs in live market data rather than static datasets.
- Improved decision-making reliability by combining real-time data retrieval with structured multi-agent reasoning, reducing dependence on stale or single-source financial data.

Teachly: AI-Based Lecture Generator *Python, Wav2Lip* 2024

- Built an AI-powered pipeline leveraging Gemini to transform raw notes into structured, classroom-ready lecture scripts with logical flow and concept expansion.
- Designed prompt-engineering pipelines with optional RAG integration to ground generated content in factual source material.
- Integrated Wav2Lip for lip-synced video generation, producing AI-generated lecture videos with synchronized speech and visuals.

Certifications

- Google Cloud Engineer Certification
- Infosys Agile Scrum Methods
- An Introduction to Programming Using Python
